

Real GDPR solution

“Real GDPR Solution” (RGS) is a software suite especially developed to enable organisations to implement and manage the processes required to be compliant with GDPR.

Unique. Information. Excellence.

A complete solution to simplify the implementation of GDPR

The software suite «RGS» has been designed and developed to facilitate, simplify and maintain the implementation of GDPR in organisation.

Organisations will considerably **speed up the compliance process**, by building a **personal data repository**, then using the information contained in this reference system to manage their obligations:

- **Respect the rights of the people** concerned (rights of access, rectification, right to be forgotten, etc).
- **Report to National Authorities.**
- **Protect personal data** against any loss, theft or misuse. (rights of access, rectification, right to be forgotten, etc).

The DPO Toolbox

«RGS» combines a wide range of tools **allowing the DPO to meet his obligations**: tools inventory to build and maintain the personal data repository and **tools using this repository to answer requirements** of the GDPR: processing records and registers, individual records (rights of persons), inventories of data and technical processes, anonymisation / pseudonymisation of data, content audit, Privacy by (re)design.

The link between IT and legal

«RGS» was designed to allow the IT and legal departments to align with regards to data.

Our **specialized software** suite greatly simplifies the work of functional analysts by establishing **the link** between the data described by the lawyers in the **register of processing** and **the technical reality** of IT Systems. The friendly and intuitive interface allows the analyst to define profiling rules based on the structure or the contents of the data, or both. This makes it possible to **define thematic classification systems** and to classify the data in one or more categories.

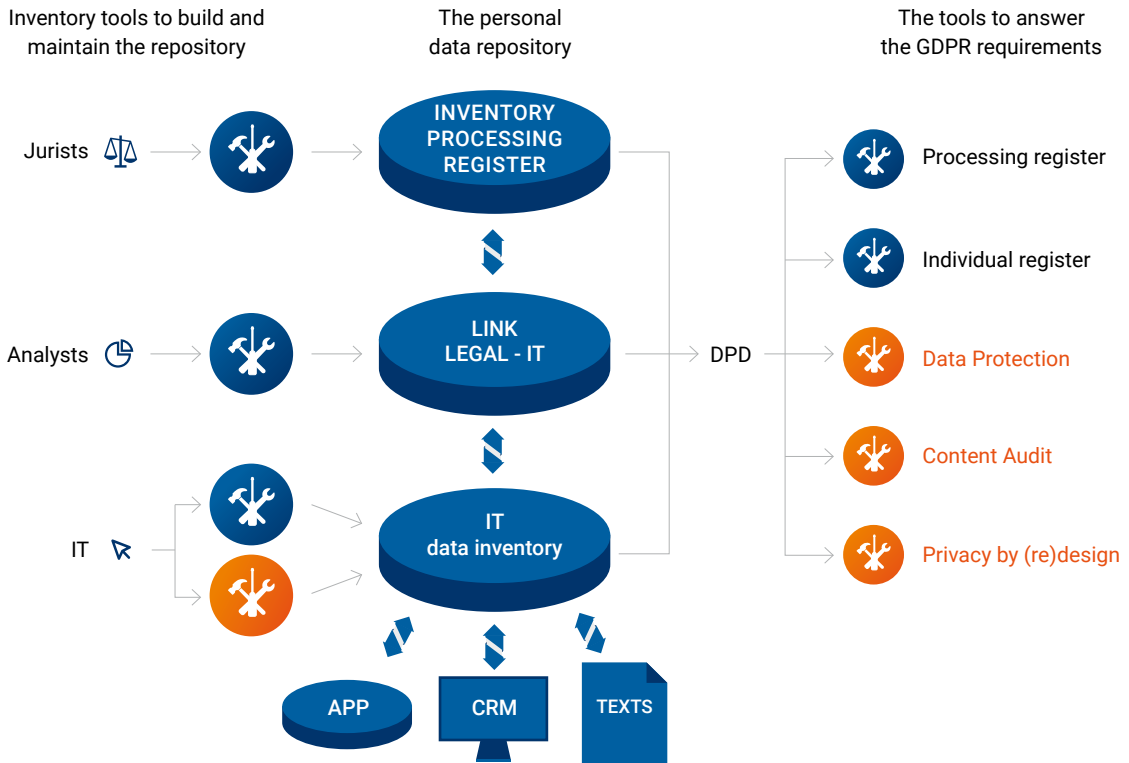

A software suite unique to the market:

- **From an organizational point of view:**
«RGS» covers the legal, business and IT aspects.
- **From a functional point of view:** The proposed tools cover the functionalities required by the GDPR: **processing register, human rights, data inventory, technical process inventory, data protection, content auditing, Privacy by (re)design.**
- **From the technological point of view:**
The proposed tools **cover all types of data** whatever the technologies, the **data** appearing in **screens** (SaaS applications) and the data contained in **the texts**.

Maximum automation

The development teams have been particularly attentive to reduce the work of users by ensuring **maximum automation** of processes.

RGS Architecture

Standard Components

- Inventory processing register:**
 Processings, consents, Personal data, data transfers, data leaks, notifications, etc.
- Inventory of personal data**
 Descriptions of personal data, classifications, management rules, etc.
- Inventory of data**
 Data mapping, technical data models, data dictionary data, glossaries, etc.
- Processing register**
 Standard descriptions of all data processing to respond to requests of the National Authority
- Individual register**
 Data extraction to handle customer information requests

Optional Components

- Inventory of Technical Processes**
 Inventory of technical processes, list of technical processes using personal data
- Data Protection**
 Pseudonymisation of personal data
- Content Audit**
 Identification of personal data, inappropriate remarks, ... in texts
- Privacy by (re)design**
 Reorganization of applications to meet the regulatory requirements

The REAL GDPR Solution Versions

The RGS solution comes in two versions: The RGS Express version and the RGS Enterprise version. Both versions are available as standard for relational databases. The RGS Enterprise version is also available as an option for NO SQL and Legacy systems.

RGS Express has been designed for SMEs who want a complete solution to bring their business into compliance. RGS Express includes a limited number of users and servers as well as a defined set of tables covering the needs of the majority of SMEs.

The RGS Enterprise is a scalable version for large companies. It includes all the standard modules indicated in the diagram and offers an additional number of optional modules and optional features to adapt exactly to the specificities and characteristics of the company.

| RGS Express | |
|-----------------------------------|-------------------------------|
| Included Modules: | |
| • Inventory processing register | |
| • Inventory of personal data | |
| • Inventory of data | |
| • Processing register | |
| • Individual register | |
| Number of users: | 5 Named users |
| Number of Servers: | Up to 3 Servers |
| Volume: | Maximum 500 |
| Perpetual license: | €45.000 Excl. VAT |
| Maintenance & Support: | 1 st year included |

| RGS Enterprise | |
|-----------------------------------|-------------------------------|
| Included Modules: | |
| • Inventory processing register: | |
| • Inventory of personal data | |
| • Inventory of data | |
| • Processing register | |
| • Individual register | |
| Number of users: | 10 Named users included |
| Number of Servers: | 10 Servers included |
| Volume: | 1500 tables included |
| Perpetual license: | €95.000 Excl. VAT |
| Maintenance & Support: | 1 st year included |
| Available options: | |
| • Additional Users | |
| • Additional Servers | |
| • Additional Tables | |
| • Audit of database contents | |
| • Legacy Systems | |
| • NO SQL | |

Services

A range of professional services, support and maintenance and tailor-made training are available upon request.
